

LARAVEL CRUD CHEAT SHEET (1 HALAMAN SAJA)

(Semua yang kamu butuh untuk tes ada di sini)

1. MIGRATION (Buat Tabel)

✦ **Perintah buat migration:**

```
php artisan make:migration create_students_table
```

✦ **Isi migration:**

```
public function up()
{
    Schema::create('students', function (Blueprint $table) {
        $table->id();
        $table->string('nim');
        $table->string('name');
        $table->string('kelas');
        $table->enum('gender', ['L', 'P']);
        $table->timestamps();
    });
}
```

✦ **Jalankan:**

```
php artisan migrate
```

2. MODEL (Hubungkan Laravel ↔ Database)

✦ **Perintah buat model:**

```
php artisan make:model Student
```

✦ **Isi model:**

```
class Student extends Model
{
    protected $fillable = [
        'nim', 'name', 'kelas', 'gender'
    ];
}
```

3. CONTROLLER (Otak CRUD)

✦ **Buat controller resource:**

```
php artisan make:controller StudentController --resource
```

4. ROUTE (Daftarkan URL CRUD)

Buka routes/web.php:

```
use App\Http\Controllers\StudentController;

Route::get('/', function () {
    return redirect()->route('students.index');
});

Route::resource('students', StudentController::class);
```

✦ **Route yang otomatis dibuat:**

Method	URL	Fungsi
GET	/students	index
GET	/students/create	create
POST	/students	store
GET	/students/{id}/edit	edit
PUT/PATCH	/students/{id}	update
DELETE	/students/{id}	destroy

5. ISI CONTROLLER (LOGIC CRUD)

✦ **index** — tampilkan semua data

```
public function index() {
    $students = Student::all();
    return view('students.index', compact('students'));
}
```

✦ **create** — tampilkan form tambah

```
public function create() {
    return view('students.create');
}
```

📌 **store** — simpan data baru

```
public function store(Request $request) {
    $request->validate([
        'nim' => 'required',
        'name' => 'required',
        'kelas' => 'required',
        'gender' => 'required'
    ]);

    Student::create($request->all());

    return redirect()->route('students.index')->with('success', 'Berhasil
    ditambah');
}
```

📌 **edit** — tampilkan form edit

```
public function edit($id) {
    $student = Student::findOrFail($id);
    return view('students.edit', compact('student'));
}
```

📌 **update** — simpan perubahan

```
public function update(Request $request, $id) {
    $student = Student::findOrFail($id);
    $student->update($request->all());
    return redirect()->route('students.index')->with('success', 'Berhasil
    update');
}
```

📌 **destroy** — hapus data

```
public function destroy($id) {
    Student::findOrFail($id)->delete();
    return redirect()->route('students.index')->with('success', 'Berhasil
    hapus');
}
```

🔵 6. VIEW (Tampilan HTML)

📌 **A. index.blade.php (daftar mahasiswa)**

```
<h1>Daftar Mahasiswa</h1>
<a href="{ {{ route('students.create') }} }">Tambah</a>

<table border="1">
    <tr>

<th>ID</th><th>NIM</th><th>Nama</th><th>Kelas</th><th>Gender</th><th>Aksi</
th>
    </tr>
```

```

@foreach ($students as $s)
<tr>
    <td>{{ $s->id }}</td>
    <td>{{ $s->nim }}</td>
    <td>{{ $s->name }}</td>
    <td>{{ $s->kelas }}</td>
    <td>{{ $s->gender }}</td>
    <td>
        <a href="{{ route('students.edit', $s->id) }}">Edit</a>

        <form action="{{ route('students.destroy', $s->id) }}"
method="POST">
            @csrf
            @method('DELETE')
            <button type="submit">Hapus</button>
        </form>
    </td>
</tr>
@endforeach
</table>

```

B. create.blade.php

```

<h1>Tambah Mahasiswa</h1>

<form action="{{ route('students.store') }}" method="POST">
@csrf

NIM: <input name="nim"><br>
Nama: <input name="name"><br>
Kelas: <input name="kelas"><br>

Gender:
<select name="gender">
    <option value="L">Laki-laki</option>
    <option value="P">Perempuan</option>
</select><br>

<button type="submit">Simpan</button>
</form>

```

C. edit.blade.php

```

<h1>Edit Mahasiswa</h1>

<form action="{{ route('students.update', $student->id) }}" method="POST">
@csrf
@method('PUT')

NIM: <input name="nim" value="{{ $student->nim }}"><br>
Nama: <input name="name" value="{{ $student->name }}"><br>
Kelas: <input name="kelas" value="{{ $student->kelas }}"><br>

Gender:
<select name="gender">

```

```
<option value="L" {{ $student->gender == 'L' ? 'selected' : ''
}}>L</option>
<option value="P" {{ $student->gender == 'P' ? 'selected' : ''
}}>P</option>
</select><br>

<button type="submit">Update</button>
</form>
```

7. PANDUAN MIKIR CEPAT (BIAR NGGA HAPALAN)

“Mau bikin CRUD? Ingat 5 hal:”

1. **Migration** → bikin tabel
2. **Model** → isi `$fillable`
3. **Route** → `Route::resource`
4. **Controller** → isi 6 method CRUD
5. **View** → index, create, edit

“Mau ambil data?”

→ `Model::all()`

“Mau simpan data?”

→ `Model::create()`

“Mau update data?”

→ `$data->update()`

“Mau hapus data?”

→ `$data->delete()`

“Habis POST/PUT/DELETE?”

→ `redirect()->route(...)->with(...)`
